(1)

Data Visulization is showing data in pictorial form like graph and charts. It help people to understand data easily & fast. It is important because it make data simple & easy to see trends but sometimes it not show all details clearly.

(2)

There are many charts like bar chat and line chat. Bar chart is used to show data in bars & compare things. Line Chart is used for time data and show increase or decreases. But bar chart also can be used for time sometimes.

(3)

Good data visulization should be clear and simple. It should not confuse people & use proper labels. Also colors should be used but not too much. Data should be correct but sometimes small error is ok. It should look nice and understanble.
